

## **Design Rules**

### **Assessment Task Number 8**

Look at some of the principles outlined in this lesson, and use one or two to provide a usability specification for an electronic meetings diary or calendar. First identify some of the tasks that would be performed by a user trying to keep track of future meetings, and then complete the usability specification assuming that the electronic system will be replacing a paper-based system. What assumptions do you have to make about the user and the electronic diary in order to create a reasonable usability specification?

- I prefer to use the Learnability and Robustness since the learnability considers how easy it is for users to accomplish a task the first time they encounter the interface and how many repetitions it takes for them to become efficient at that task. And Robustness is concern with the level of support provided to the user in determining successful achievement and assessment of goal directed behavior.
